

Snaily specializes in creating a tightly interconnected intelligence ecosystem for SEN services, with a vision to support the growth of SEN students and foster inclusivity within communities, families, and schools. By leveraging technological intelligence, Snaily aims to bridge the gap between SEN students and the majority population.

- The system can effectively reduce the SEN paperwork in the school to 89%, and the time released allows teachers to have more time to rest and do other teaching and counselling work.

Social Impact:

- The platform prevents the discontinuity in support records and assists SEN students in vocational matching upon them graduating from secondary school.
- The platform enhances communication and document transmission between parents and teachers to improve home-school collaboration. It also strengthens communication among various schools, so that they can share the specific SEN cases and experiences with other schools.
